Complete Business Phone Service

One Vendor - One Bill - One Less Headache.

Without a phone system (PBX) in your office, your business communications are immediately simplified and costs reduced. How many calls do you make to get help? The phone company, your PBX vendor, the "phone guy"? Too many cooks in that kitchen, all on your dime. The finger-pointing game is over. You get one flat rate bill that covers it all. When you need help, call us, it's our pleasure to solve your problems and we won't send you a bill for the privilege.

Reliable and Emergency Ready.

What happens to your business without phones for a few hours...or days? Got back-up power for your PBX? Anyone checked the battery lately? How long does it take to get a replacement if your phone system fails? We connect you to our Telco-grade facilities located in the same data center as AT&T, Verizon and Level(3). It has multiple back up systems that can keep going indefinitely in an emergency. We also have a mirror system far away with all the same back up features. And if you have an emergency at your office we can quickly and seamlessly route calls to your cell, home or remote office phones.

Business Is Always Changing.

We get that. That's why we don't force you into a long term contract commitment. Sign up when you need the service. When you don't need the service send the phones back and we'll stop billing you. You are free to come and go as you please. It's that simple.

Future Proof.

We are constantly improving and growing our Hosted PBX with new and better communications features. As upgrades become available, you get them, instantly, without any increase in your bill.

Point and Click to Make Changes.

You have total control over your phone system through a simple web page. Need to add a user, change a user, make system wide changes? Your office administrator can make system changes immediately without the help of expensive technical staff. Plus, users have control over their own phone through a web page so they can set and turn features on and off just as easily. It's so easy even the boss can do it.

It Works Just Like Your Old Phone System, Only Better.

It can do everything your old phone system did: Auto attendant (automated receptionist), hunt groups, call park and pick up, caller ID, call forwarding, call hold, LDAP integration, music on-hold, call transfer, call waiting, 3-way calling, redial, do not disturb, speed dial and hook flash is all there.
